

Hello, I'm Mansi Kala.

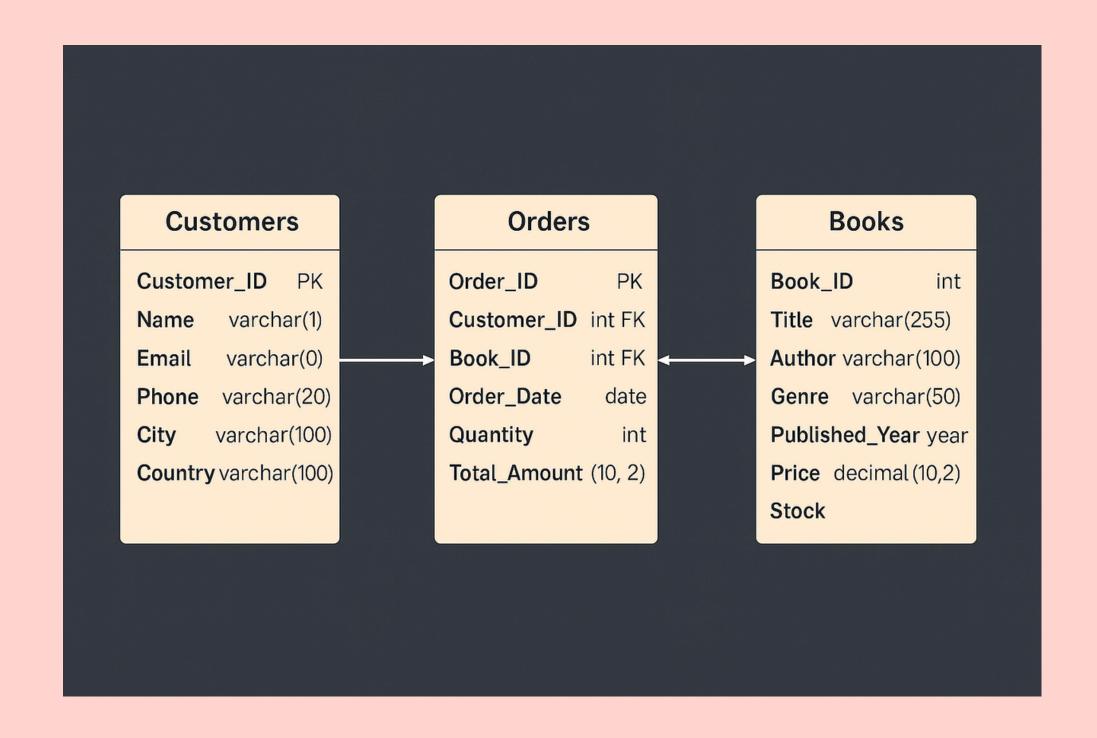

In this SQL project, I analyzed bookstore sales data to answer key business questions. My work includes identifying top genres, bestselling books, customer purchase patterns, and author-wise sales performance. I also explored trends like high-value orders, frequently ordered books, and city-wise customer distribution.

Tools Used: MySQL

The next slides showcase my queries, insights, and takeaways from this analysis.

SCHEMA OVERVIEW

QUESTIONS

- Show orders placed in November 2023
- Books published after the year 1950
- All genres available in the Books table
- Retrieve the total number of books sold for each genre
- Find the average price of books in the "Fantasy" genre
- List customers who have placed at least 2 orders
- Find the most frequently ordered book
- Show the top 3 most expensive books of 'Fantasy' Genre
- Retrieve the total quantity of books sold by each author
- List the cities where customers who spent over \$30 are located
- Find the customer who spent the most on orders

SHOW ORDERS PLACED IN NOVEMBER 2023

select* from orders where order_date between '2023-11-01' and '2023-11-30';
